OpenNI

OpenNI or *Open Natural Interaction* is an industry-led <u>non-profit organization</u> and <u>open source software</u> project focused on certifying and improving interoperability of <u>natural user interfaces</u> and <u>organic user interfaces</u> for Natural Interaction (NI) devices, applications that use those devices and <u>middleware</u> that facilitates access and use of such devices.^[1]

<u>PrimeSense</u>, who was founding member of OpenNI, shutdown the original OpenNI project when it was acquired by <u>Apple</u> on November 24, 2013; since then Occipital and other former partners of <u>PrimeSense</u> are still keeping a forked version of OpenNI 2 (OpenNI version 2) active as an open source software, primary for their own Structure SDK (<u>Software Development Kit</u>) which is used by their Structure Product.^[2]

History

The organization was created in November 2010,^[3] with the website going public on December 8.^[4] One of the main members was <u>PrimeSense</u>, the company behind the technology used in the <u>Kinect</u>, a <u>motion sensing input device</u> by <u>Microsoft</u> for the Xbox 360 video game console.

In December 2010, <u>PrimeSense</u>, whose depth sensing reference design <u>Kinect</u> is based on, released their own open source drivers along with motion tracking middleware called <u>NITE.[5]</u> PrimeSense later announced that it had teamed up with <u>Asus</u> to develop a PC-compatible device similar to Kinect, which will be called <u>Wavi Xtion</u> and is scheduled for release in the second quarter of 2012.^[6]

Their software is currently being used in a variety of open-source projects among academia and the hobbyist community. Recently, software companies have attempted to expand OpenNI's influence by making working with and integrating the technology dramatically simpler.^[7]

After the acquisition of <u>PrimeSense</u> by <u>Apple</u>, it was announced that the website OpenNI.org would be shut down on April 23, 2014.^[8] Immediately after the shutdown, organizations that used OpenNI subsequently preserved documentation and binaries for future use. Today, Occipital and other former partners of PrimeSense is still keeping a forked version of OpenNI 2 (OpenNI version 2) active as an open source software for their Structure SDK for their Structure Product.^[9]
